

## **POST HYDRO-SEEDING LAWN CARE**

### **WATERING PRACTICES:**

Once the newly Hydro-seeded lawn has set for 24 hours, it's time for watering. Watering should take place in the morning and late afternoon. For 20 minutes per section. Keep your mulch bed moist, but do not over water. If you see puddles developing, stop watering. Lack of watering can cause the seed to dry up and expire.

### **EXPECTATIONS:**

Residential property's that are watering areas as instructions suggest, will see growth developing between 7-14 days, Areas will fill in around 3-4 weeks.

Commercial property's that are unable to water areas as suggested, will take longer to produce results, Growth will start between 12-20 days, and fill in around 4-5 weeks. Growth will depend on rainfall events, and temperature.

### **WHEN TO MOW:**

Once your grass is approximately 3 inches long it is time for its first mowing. Make sure your mower blades are sharp. When mowing make sure you never take more than 1/3 inch off the new grass. Also it is highly recommended to not collect the clippings for the first few cuts, the clippings will biodegrade within the turf, this helps feed the plant and accelerating growth. If you prefer to bag your clippings then its highly recommended to put your lawn on a fertilizer schedule.

### **WHEN TO FERTILIZE:**

Depending on your lawn installation program, we will be back in 3 weeks to re-fertilize your lawn with a slow release starter fertilizer. If you are not on a program with Simply Green Hydroseed, then you should apply the correct fertilizer yourself. This will ensure all the grasses have the proper nutrients they need to fully germinate and grow properly. As far as weed control. After the third mowing, your lawn is considered mature, and can handle certain weed control products, Simply Green Hydroseed has a relationship with a well known applicator and can coordinate any services that you may need.

### **REMEMBER:**

Your new lawn is still in its infancy. Just because your lawn looks fully established, doesn't mean you can stop watering all together. It also doesn't mean your should change your fertilizing or mowing practices. It takes many months, before you lawn is ready for the hot summer months, and cold winters. Before any pesticide or herbicide is applied, its highly recommended to speak with a professional applicator.

### **WARRANTY:**

All Warranty's are void if customer does not fulfill proper watering instructions of 20 minutes per area, two times a day for the first two weeks. Then once a day for 20 minutes per section for the next two weeks. Customer is also responsible for fertilizer applications unless under program with Simply Green Hydroseed. All products must be approved before applied, if damage occurs from unauthorized products, Simply Green Hydroseed is not responsible for any damage. In the event of abnormal weather, such as damaging winds, hail, downpours, fire, and damage caused by animals, Simply Green Hydroseed can not guarantee work, due to the act of god. If this occurs the need for re-seeding may occur at half the original cost with a minimum charge of 300.00 dollars.
